Profile Summary

Practical and results-oriented DevOps & Cloud Engineering intern with hands-on experience building CI/CD pipelines, automating infrastructure using Terraform, containerizing applications with Docker, and deploying to Kubernetes (EKS). Comfortable working in Linux environments and collaborating with development teams to deliver stable, production-ready deployments. Seeking to apply automation and cloud skills in a challenging DevOps role.

Professional Experience

HisanLabs Pvt Ltd, DevOps Intern

Dec 2024 – Present, Pune

- **Build and maintain CI/CD pipelines** using **Jenkins** and **Git/GitHub** to automate builds, tests, and deployments, removing repetitive manual steps and improving release reliability.
- **Create reusable Terraform modules** to provision AWS infrastructure (VPC, EC2, S3, IAM), enabling fast, repeatable, and version-controlled environment setups.
- **Containerize services with Docker** and deploy them to **Kubernetes (EKS)**; implement rolling updates plus readiness and liveness probes to avoid downtime.
- **Automate image build-and-push workflows** in Jenkins and integrate static quality/security checks in the pipeline to catch issues early.
- **Implement monitoring and alerting** with **CloudWatch**, **Prometheus**, and **Datadog**; build dashboards and runbooks that speed up detection and recovery.
- **Collaborate with developers and mentor** to define branching/release strategies, add smoke tests, and design safe rollback procedures.
- **Author documentation** — deployment runbooks, onboarding notes, and troubleshooting guides — to help teammates operate and maintain services reliably.

Impact: Reduced manual deployment steps and improved deployment consistency; helped the team move toward production-grade automation and observability.

What I learned: Practical infrastructure-as-code, end-to-end CI/CD design, deploying and operating apps on EKS, observability best practices, and cross-team collaboration under mentor guidance.

Tools & Technologies : Jenkins · Git · GitHub · Terraform · AWS (VPC, EC2, S3, IAM) · Docker · Kubernetes (EKS) · Prometheus · Grafana · Datadog · CloudWatch · IaC · CI/CD · Automation · Runbooks · Linux · Bash · Python

Technical Skills

- **Cloud Platforms:** AWS ,Azure Fundamentals, GCP Fundamentals
- **DevOps & Automation:** Jenkins, Git, GitHub, GitLab, Bash, Python, Terraform, Ansible
- **Containerization:** Docker, Kubernetes
- **Programming Languages:** Java, Spring Boot, JavaScript, HTML5, CSS3, Python
- **Databases:** MySQL, MongoDB (Beginner)
- **Monitoring & Logging:** Datadog, Prometheus, Grafana ,CloudWatch
- **Operating Systems:** Linux Administration, Networking

Education

B.E., Computer Science & Engineering — RMD Sinhgad College of Engineering, Pune (May 2020 – May 2024)

Achievements

Represented university football team in intercollegiate tournaments, showcasing leadership and teamwork
